**Subject:** England pellet stove model 25-PDVC, 25-PDVCH, 55-SHP10, 55-SHP10L, and 55-TRP10  
**Attachments:** 2017 certifiedwood space heaters.pdf

Rafael, the England Pellet Stove model 25-PDVC, 25-PDVCH, 55-SHP10, 55-SHP10L, and 55-TRP10 appears on the EPA wood heater database certified at 1.4 grams per hour. However, when I review the historic list from 2017 (attached), it appears that the same model had a test report that measured emissions at 3.1 grams per hour. When I review the England Stove website, I can only find the most recent test for that model and not the previous test with the results posted in 2017. NESCAUM would like to obtain copies of the older test. Can you please advise as to where I can find this report online since it is not currently on the manufacturers' website? Thank you in advance for your help.

Sincerely,

Lisa Rector
